"Software Developer | Transforming Ideas Into Reality"

Professional Summary

Cross-platform application developer with 3+ years of hands-on experience building Flutter applications and 4+ years working primarily with Flutter and Python. Proficient in Dart and Python, with a strong foundation in Java, C, and C++ developed over multiple academic years. Experienced in designing secure, scalable, and maintainable applications, with a strong analytical mindset backed by a Bachelor's degree in Computer Applications and a specialization in Data Analytics. Passionate about solving real world problems, improving user and developer experience, and building impactful user-focused products.

Skills

Programming Languages: Dart, Python, Java, C, C++.
Frameworks & UI: Flutter,GetX, Bloc, Flet, Tkinter.
Backend & Databases: Firebase, Firestore, REST APIs, Appwrite.
Tools: Git, GitHub, Android Studio, Pycharm.
Core Competencies: Algorithm Design, Automated Trading, Software Debugging, Unit Testing, Problem Solving.

Education

Relevant Courses: Python, Machine Learning, Big Data Analytics, Cloud Computing, Artificial Intelligence

Bachelor of Computer Applications with Specialization in Big Data Analytics with IBM (BCA) Lovely Professional University Phagwara, Punjab, India	Jul 2024 CGPA: 7.9
Secondary Education (10th) Sacred Heart School Siliguri, West Bengal, India	Mar 2019 Percentage: 93%
Senior Secondary Education (12th) Tilak Public School Jaipur, India	April 2021 Percentage: 81%

Projects

Modern Tkinter GUI Library (Heema) — Desktop UI Toolkit (Python, Tkinter) | Jan 2024

- Developed a reusable Tkinter GUI framework to modernize Python desktop application development with consistent styling and reusable components.
- Implemented modern themes, custom widgets, icon support, and scrollable UI containers to improve usability and development speed.
- Added embedded browser window support to enable hybrid desktop workflows and web-view based interfaces.
- Reduced repetitive UI implementation by providing reusable layouts and standardized components.
- Link: <https://github.com/snehccurry/Heema>

Laptop Cooler & Cleaner Utility — System Maintenance Tool (Python) | Aug 2022

- Built a lightweight system utility to reduce laptop overheating by monitoring system usage and applying workload-based cooling logic.
- Improved laptop battery efficiency by optimizing power usage, lowering temperatures from approximately 80°C to 30°C.
- Developed an automated cache-cleaning module that categorizes and removes junk files to improve long-term storage health.
- Improved system stability and performance consistency during extended usage sessions.
- Link: <https://github.com/snehccurry/PC-cooler>

Workspace Manager — Virtual Desktop Switcher Tool (Python, Heema) | 2024

- Developed a productivity-focused desktop tool to streamline navigation across multiple applications and reduce multitasking overhead.
- Implemented a cursor-based workspace menu triggered via extra mouse buttons, enabling faster switching between virtual desktops.
- Improved workflow organization by enabling clean separation of tasks across dedicated desktops.
- Link: <https://github.com/snehccurry/Workspace-Manager>

Res-Q-Me — Offline Natural Disaster Guidance App (Python) | 2023

- Developed an offline-first emergency guidance application to provide actionable instructions during natural disasters when internet access is unavailable.
- Designed the application for reliability and accessibility, ensuring critical information remains usable under crisis conditions.
- Link: <https://github.com/snehccurry/vhelp-ResQMe>

Finance Tracker Dashboard — Expense Management Web App (Flutter, Firebase, Firestore) | Jun 2023

- Developed a finance tracking web application to improve expense management through structured logging and visual analytics.
- Built dashboards to summarize spending patterns and support better budgeting and planning.
- Integrated Firebase and Firestore for secure storage and real-time updates across sessions.
- Link: <https://snehccurry.github.io/xpenseManager/>

Sci-Fi Notes App — Transparent Notes Tool (Python) | 2021

- Developed a lightweight transparent desktop notes tool to support real-time note-taking while keeping online learning content visible.
- Improved usability during online classes by enabling note-taking without repeated window switching.
- Designed a minimal UI optimized for low resource usage and fast access during long study sessions.
- Link: <https://github.com/snehccurry/Scifinotesapp>

Work Experience

Software Developer | Nvorous | Remote

Jul 2024 - Mar 2025

- Created Algorithms for trading with XAUUSD.
- Reduced the risk of scalping by 30 percent.
- Created algorithms to fight deadlock like situations and reducing the loss by up to 70 percent in 30 percent of the scenarios.

Software Developer | Suteble Ventures | Hybrid

Jul 2024 - Nov 2025

- Created a full stack ecommerce website and app for both Android and IOS.
- Created an online presence website for a real estate firm named Assure Acres.
- Link: https://snehccurry.github.io/assure_acres/

Software Developer | Smart Sect Opportunities |

Dec 2025 - Current

- Created a cross-platform app for Android and IOS that helps students.
- Designed an interest driven system where students can find all the opportunities and life lessons based on their interests.
- Implemented authentication, payment gateways, subscriptions, and role-based admin panel.
- Used caching to reduce bandwidth used to reduce costs by 90 percent.
- Created Manager-View Model, designed to keep code clean, scalable, and outperform existing architectures.
